

JUELI RAJESH SAWANT

Data Analyst | End-to-End Analytics & Applied ML | Python, SQL & Dashboard Development

Phone: 585-981-1827 | Email: jueeli97@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Data Analyst who starts with the business problem and builds whatever's needed to solve it, whether that's a SQL query, a dashboard, or a deployed ML model. M.S. in IT & Analytics. I catch data quality issues before they distort a decision, turn vague questions into clear KPIs, and explain findings in terms people can actually act on. I've taken projects from a blank dataset through to something running in production.

TECHNICAL SKILLS

Languages: Python, SQL, R, JavaScript

Data & Analytics: ETL Pipelines, Data Modeling, Data Validation, KPI Development, Funnel/Cohort Analysis, EDA

Visualization: Power BI (DAX), R Shiny, React/Recharts, Tableau, Excel

ML & AI: XGBoost, KMeans Clustering, Isolation Forest, Time-Series Forecasting, Feature Engineering, Generative AI, Gemini API, Prompt Engineering, LLM

Backend & Cloud: FastAPI, REST API Design, PostgreSQL (Supabase), Docker, Google Cloud Run, Vercel, Git/GitHub

WORK EXPERIENCE

Data Scientist · Greenstand · Rochester, NY

Aug 2026 – Present

Data Quality & Analytics

- Profiling grower activity and tree-capture data on Greenstand's Treetracker platform using SQL and Python to establish baseline activity metrics (capture volume, active growers, species and regional distribution) ahead of any quality or scaling decisions.
- Working through the dataset systematically to catch gaps early, missing coordinates, inconsistent timestamps, incomplete fields, since those are the kind of issues that quietly undermine impact numbers reported to donors and partners.
- Designing rule-based logic to catch duplicate and invalid capture records, using grower ID, GPS proximity, and timestamp windows to make "is this data real" testable and repeatable.
- Quantifying how much of the dataset is affected by these issues, so the team can prioritize fixes by actual impact instead of guessing at what matters most.

Assistant System Engineer · TCS Limited · India

Apr 2021 – Jul

2023

Data Analysis & Analytics-Driven Web & Chatbot Systems

- Dug into HR onboarding and helpdesk data to find what was blocking engagement, feeding those findings into product changes that drove a 20% increase in user satisfaction and 25% growth in mobile adoption.
- Caught inconsistencies across reporting dashboards before they reached leadership, keeping KPI reporting accurate for decision-making.
- Traced chatbot response-time bottlenecks back to their source and worked with engineering to cut response time by 20%.
- Ran NLP-based sentiment analysis on chatbot feedback to surface real user pain points, which fed into product changes that lifted engagement by 15%.

PROJECTS

InsightPulse - AI-Powered Customer Intelligence Platform | Python, FastAPI, Gemini API, React, Docker, GCP | [GitHub](#)

May 2026 – July 2026

- Built a self-serve analytics platform that ingests raw e-commerce CSVs and computes five KPI modules (Revenue, AOV, Channel Performance, Customer Ranking, Category Mix), turning messy transaction data into a dashboard in minutes.
- Designed an ETL pipeline that auto-normalizes 30+ real-world column variations and handles missing or malformed data, so it works on actual seller exports instead of pre-cleaned samples; validated against a 500K+ row public dataset and 33K+ rows of custom data.
- Trained a four-model pipeline (XGBoost churn classification, KMeans segmentation, LTV forecasting, Isolation Forest anomaly detection) that runs live per upload, flagging at-risk customers and revenue drivers without any pre-trained weights.
- Built a Gemini AI copilot that grounds its explanations in the platform's real KPI and model outputs, so a non-technical user gets a plain-English reason behind a number instead of just the number.
- Deployed the full stack to production, including Docker containers on Google Cloud Run with auto-scaling, a React frontend on Vercel, and Supabase PostgreSQL for storage, as a build carried from architecture through cloud infrastructure, now live at [insightpulse-app.vercel.app](#).

Electricity Demand Forecasting for New York State | Python, XGBoost, LSTM, Prophet, Power BI | [GitHub](#)

Aug 2025 – Dec 2025

- Built an end-to-end forecasting pipeline integrating NYISO load data with NOAA weather data across 58,000+ observations to support multi-day demand planning.
- Compared four forecasting methods (SARIMA, Prophet, XGBoost, LSTM) on MAE, RMSE, and MAPE, and landed on XGBoost as the most reliable at 2.06% MAPE.
- Delivered Power BI dashboards that turned model output into trend views utility planners could actually use.

E-commerce & Marketing Analytics | SQL, Power BI, DAX | [GitHub](#)

Sep 2025 – Oct 2025

- Joined 9 relational tables in SQL to build a clean, analysis-ready dataset for marketing and sales reporting.
- Built a Power BI dashboard with DAX measures for Revenue, AOV, CAC, and ROAS, giving marketing leadership channel-level visibility for budget calls.
- Traced the customer conversion funnel to find where drop-off was happening, pointing to where acquisition spend was underperforming.

Hospital Readmission Analytics | R, R Shiny, Logistic Regression | [GitHub](#)

Oct 2025 – Nov 2025

- Analyzed 100K+ patient records to identify the strongest drivers of 30-day hospital readmission using statistical and exploratory methods.
- Built a logistic regression model, evaluated with ROC/AUC, that scores patient-level readmission risk.
- Designed an interactive R Shiny dashboard so clinical stakeholders could explore cohorts and utilization patterns on their own.

EDUCATION

MS, Information Technology & Analytics | RIT - GPA: 3.8

Aug 2023 – Dec 2025

BE, Electronics & Telecommunication | Univ. of Mumbai - CGPA: 8.12

Aug 2015 – Jul 2019
